COMIC BOOK PROJECT
Presentation by Kendrick Payton
Fab Planet is a comic book about Ethan Green who is a Lapitine (humanoid rabbit) from the farm planet Vetiver. He wants to be an engineer on the planet Silcia, (aka Fab Planet) that is known for manufacturing AI computer chips.
However, being poor pushes him further away from his dream. So he does the unthinkable to solve his money problem and becomes a bounty hunter in the futuristic gig economy!
Ethan’s race is known for their abilities to grow and nurture farm lands. By combining this skill with his knowledge in engineering he is able to create eco-friendly weapons used to catch bad guys.
Fab Planet promotes environmentalism to young adult readers and shows how finding a way forward is never a straight path.
